for business communication
and support of your sales representatives

Areus Portal – Your assistant for business communication

Areus Portal is a B2B solution designed for successful communication and cooperation for a company, with its business partners and distributors. It is a sophisticated system in which e-shop and system for effective support of sales representatives are essential but by far not the only components.

Who is the portal designed for?

For the major part of small and medium-sized companies from different business areas:

Manufacturing

- + agriculture
- + engineering
- + automotive
- + food industry
- + furniture production
- + mining of raw materials
- + shoe industry
- + manufacture of semi-finished products
- + glass industry
- + textile production

Trade (Wholesale)

- + books and magazines distribution
- + industrial products
- + building materials
- + food and beverages
- + metallurgical materials
- + fuel distribution
- + packaging materials
- + installation materials
- + sale of plants and flowers
- + pet supplies and feed
- + sale of machinery and equipment

Services

- + transport and distribution
- + repair business
- + warranty and post warranty service
- + healthcare services
- + construction industry
- + road maintenance
- + rentals
- + accommodation services
- + plumbing services
- + fairs and exhibitions

Why Areus Portal?

Areus has a proven track record and has already been successfully implemented in many companies. The portal forms an interface between both internal and external business tools/systems. The majority of the data Areus Portal works with is extracted from internal systems (ERP, CRM, attendance system Intranet, BI, media libraries, etc.) The tool provides maximum utilization of this data enabling companies to keep track of all the information in one place and by doing so significantly streamlining the ordering and shipment process of goods.

What are benefits of the portal?

Time and cost savings

Effective management of communication with partners

Quality support of sales representatives

Well arranged management of documents and data

Sophisticated search

Features

Minimum requirements for corporate infrastructure

High level of security

Customization to suit your needs and requirements

Online access from anywhere 24/7

Continuous development and adaption to user needs

Areus is more than just an e-shop

Areus Portal represents a complex solution for communication between business partners. It combines many functions and modules from different areas:

Trade

price lists • purchase and sale • product catalogue • information about availability • import of orders

Economy

orders • delivery notes • invoices • shipments and their tracking • reports and statistics

Deals

creation of variants • wide customization options • discount system • easy ordering • evaluating of success

Time management

calendar of events • reservations of resource • registration and administration of participants • administration and management of meetings • attendance summary

Communication

contacts • sharing of documents and information • website • forms and customized modules • newsletters and notifications

Forget complicated installation

All your business partners and employees will need for access to the portal is an internet browser.

Sharing will enable mutual interaction and communication between your business partners and employees. For example you will be able to:

- + create and send newsletters and emails
- + publish articles, texts and events
- + share and enable reservations of offered resources (demo products, replacement devices in time of repairing)
- + publish dates of events and manage registered participants

The purpose of Areus Portal is to satisfy both current and future needs of a company, which is ensured by wide range of customization of the portal:

- + graphical interface of portal
- + basic system functions – price calculations or formatting of ordering codes
- + advanced system functions – access levels and user roles
- + specific behaviour of the portal can be customized to suit your requirements – e-mail notifications, custom forms or the entire modules
